

First, I would like to take this opportunity to thank everyone involved in this program. It is an honor to be considered, and the program provides an amazing, practical way to push students beyond our limits. Regardless of the outcome, I am incredibly appreciative of the experience and the lessons I've learned will remain a highlight of my time at Brandeis.

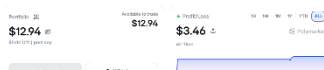

1. What has your progress been and what role has your Brandeis prize/award played in that?

Since our initial pitch, we have successfully developed and deployed two active platforms within our prediction market and trading ecosystem: **PolyGains** (polygains.com) and **Trump Trader** (tac.ooo).

- **PolyGains** is fully live as an insider and whale-trading terminal. It successfully scans every market on Polymarket in real-time, detecting unusual betting activity and tracking zero-history wallets making large, high-conviction trades.
- **Trump Trader** is live and functioning as a real-time sentiment analysis tool, instantly converting major political tweets and statements into actionable trade signals for equities and crypto.

The Brandeis prize/award was instrumental in this progress. The funds allowed us to cover the costs of building our complex indexing infrastructure (utilizing the SQD Network for PolyGains) and hosting the real-time data pipelines required to spot market-moving signals the second they happen.

Currently, we are developing a complete end-to-end system. Our prototypes have been highly successful so far, yielding an average profit of **30%**.

In an early simulation, we created 100 users with a \$10 budget each. Each user ("agent") was assigned to a different domain (e.g., Politics, Sports, Crypto, Esports, Iran-US, Finance). While some domains are correlated, they are not fully duplicated. Some agents achieved over **1000% profit**, though there remains significant room for further research and testing as some (fewer) of the agents also provided a full loss and there are some transactional fees that needs to be evaluated better.

2. Business outline. What are you offering and how will you get people to pay?

We offer retail traders the kind of sophisticated, data-driven trading intelligence that is usually reserved for institutional funds. Our offering gives traders an edge: PolyGains allows them to copy or fade potential "insider" trades on global prediction markets (politics, sports, crypto), while Trump Trader cuts through political noise to identify immediate market impacts.

Monetization Strategy: Prediction markets have surged rapidly, with global monthly trading volumes climbing from under \$5 billion in late 2025 to roughly \$24 billion by mid-2026. With this rise, we anticipate a correlated increase in the use of quantitative trading tools for these markets.

We are pursuing two simultaneous strategies:

1. **Freemium Retail Model:** We operate on a freemium model. Currently, users can join our email lists and view basic dashboards for free, which lowers the barrier to entry and builds our audience. We will generate revenue by introducing a premium, monthly subscription tier. Free users will receive delayed alerts, while paying subscribers will unlock immediate real-time push notifications, API access, advanced copy-trading simulation features, and the ability to track specific whale wallets continuously.
2. **B2B Regulatory Compliance Solutions:** Prediction market platforms profiting from this surge in volume will face stricter regulations from host countries due to concerns over money laundering and suspicious activities. Currently, these platforms lack the experience to provide a full-scale compliance solution. By developing a robust analytical solution, we can help these companies navigate regulatory restrictions and open new markets for increased activity. This service can be provided for a premium fixed cost or a percentage of revenue. It is important to note the increased regulatory activity in this space, especially as platforms like DraftKings expand into new markets (e.g., DraftKings' nationwide expansion - <https://dknetwork.draftkings.com/2026/06/17/draftkings-is-now-available-nationwide-in-the-usa-read-more-inside/>). Our project is highly valuable to these types of companies, which prefer an independent, turnkey service solution that can be presented to lawmakers and regulators.

3. How many actual customers do you have? Are they paying customers?

We currently have a growing base of active users (over 1,000 unique email addresses in our database) who utilize our live web dashboards and have subscribed to our automated email alerts across both platforms. Because our immediate focus has been on user acquisition, platform stability, and proving the accuracy of our trade signals to the community, our current users are on the free tier. We do not have paying customers just yet, but we are actively using our free user base to test our upcoming premium features before activating the subscription paywall.
